Email Subject: The CLEAR Outcomes Study for People with High Cholesterol who are also statin intolerant

People who are unable to take statin medications due to side effects may be eligible for a clinical research study. This study is being conducted to evaluate the safety and effectiveness of an investigational medication that may help to reduce the occurrence of major Cardiovascular Disease (CVD) events such as heart attacks and strokes in patients with or at risk for CVD, who are also statin intolerant.

You may qualify if you:

- Are 18 years of age or older
- Have a history of, or are at high risk for Cardiovascular Disease (CVD)
- Are statin intolerant (have not been able to tolerate two or more statins),
- Meet additional study criteria.

Qualified participants will receive all study medication and study-related care from a dedicated team of medical staff at no cost.

Health insurance is not required to participate.

To learn more about the study and to see if you may qualify, please visit our website at [clear.researchstudyinfo.com](http://clear.researchstudyinfo.com).
